ENTERPRISE EDITION — 2026

PLATFORM OVERVIEW

SlimFile is a **complete file intelligence** platform

SlimFile is a cloud-based platform that combines powerful file compression, format conversion, AI-powered document summarization, a full developer API, and a real-time team collaboration suite — all under one roof. It is used by individuals, businesses, developers, and institutions across the globe to handle files faster, smarter, and more efficiently.

"SlimFile is not just a compression tool. It is infrastructure — the same way email is infrastructure. Every organisation that handles digital files needs SlimFile."

The Five Pillars of SlimFile

COMPRESSION

CONVERSION

AI SUMMARIZER

DEVELOPER API

COLLABORATION

Compression & File Tools

- ✓ Compress images: JPEG, PNG, WebP — up to 95% reduction
- ✓ Compress PDFs, DOCX, XLSX, PPTX
- ✓ OCR — extract editable text from scanned documents
- ✓ PDF Merge & Split (SlimFile Forge)
- ✓ PDF Password Protect & Unlock
- ✓ Batch processing — multiple files at once

Conversion, AI & Collaboration

- ✓ Convert PDF ↔ DOCX, JPEG, PNG, WebP
- ✓ Convert PPTX, XLSX to PDF in one step
- ✓ AI Summarizer — powered by Meta Llama 3
- ✓ Team Workspaces & Live Activity Feed
- ✓ Built-in Video Meetings & Whiteboards
- ✓ Rich document editor & personal dashboard

DEVELOPER INFRASTRUCTURE

One API. **Infinite integration** possibilities.

The SlimFile API is a RESTful HTTP interface that gives developers and institutions direct programmatic access to SlimFile's entire compression and conversion engine. Integrate it once into your system and your platform gains the full power of SlimFile — without your users ever leaving your product.

How it works

Developer Tools

Send a file to the API endpoint with your API key. SlimFile compresses or converts it on the server and returns the processed file or a download link — all within seconds. No file is stored permanently. All transfers are encrypted.

EXAMPLE — COMPRESS A PDF VIA REST API

```
# POST request to compress a PDF
curl -X POST https://api.slim-file.com/v1/compress \
  -H "Authorization: Bearer YOUR_API_KEY" \
  -F "file=@report.pdf" \
  -F "quality=80" \
  --output compressed_report.pdf
```

JAVASCRIPT SDK — COMPRESS & SUMMARIZE

```
import SlimFile from '@slimfile/sdk';

const sf = new SlimFile({ apiKey: 'YOUR_KEY' });

// Compress a PDF
const result = await sf.compress.pdf(file, { quality: 80
});

// Summarize a document with AI
const summary = await sf.ai.summarize(file);
```

REST API

Standard HTTP endpoints — works with any language or framework. Full JSON responses with metadata.

```
api.slim-file.com/v1/
```

SlimFile SDK

Official JavaScript/TypeScript SDK. Install once, compress anywhere. Works in Node.js and the browser.

```
npm install @slimfile/sdk
```

SlimFile CLI

Command-line tool for developers and IT teams. Compress files directly from the terminal — great for automation pipelines.

```
npm install -g @slimfile/cli
```

Security: All API requests are encrypted via HTTPS. Files are processed in isolated environments and never stored permanently. Fully GDPR-aware infrastructure. Institutions can request on-premise deployment for maximum data control.

WHY INSTITUTIONS NEED SLIMFILE

slim-file.com

INSTITUTIONAL IMPACT

Every organisation that handles files **needs this.**

Data volumes are growing faster than storage budgets. Every institution — from a broadcasting station transmitting video packages to a government ministry archiving national records — faces the same challenge: too many files, too large, too slow. SlimFile solves this at the infrastructure level.

BROADCASTING STATIONS — TV3, GTV, ETC.

Compress media assets without losing broadcast quality

GOVERNMENT MINISTRIES & AGENCIES

Digitise, compress, and archive national documents at scale

- Compress video thumbnails and promotional images for web at 70% smaller file size
- Optimise PDF press kits, schedules, and scripts for fast distribution to teams
- Use the API to auto-compress all uploaded assets in your CMS
- Reduce bandwidth costs for streaming preview assets by up to 60%
- Archive documentary stills and archive photos at a fraction of storage cost

- Compress millions of scanned government records with the API batch endpoint
- Use OCR to make physical documents fully searchable and digital
- Reduce e-government portal document sizes for faster citizen access
- Integrate into national document management systems via the REST API
- Password-protect classified PDF documents with 128-bit encryption

SCHOOLS, UNIVERSITIES & EDTECH

Make learning materials load faster on every device

- Compress course PDFs and lecture slides by up to 80% for easy downloads
- Use AI Summarizer to condense lengthy research papers into key points
- Optimise student portal images and assets for mobile users on slow networks
- Batch-compress an entire semester's worth of materials via the API
- Reduce e-library storage costs without degrading document quality

HOSPITALS & HEALTHCARE PROVIDERS

Efficiently archive patient records and medical reports

- Compress scanned medical records and discharge summaries without data loss
- Use OCR to digitise handwritten patient forms for searchable records
- Reduce storage overhead for radiology image previews and PDF reports
- API integration into hospital management systems (HMS) for auto-compression
- Password-protect confidential patient documents before sharing

BANKS, FINTECH & FINANCIAL INSTITUTIONS

Streamline compliance documents and client statements

- Auto-compress monthly bank statements before emailing to customers
- Reduce PDF sizes of KYC documents and loan agreements by 80%
- Use AI Summarizer on lengthy financial reports and audit documents
- API integration with core banking platforms for seamless document handling
- Encrypt and password-protect sensitive financial PDFs before distribution

LAW FIRMS & LEGAL BODIES

Compress and manage high-volume legal documentation

- Slim down court briefs, contracts, and case files for fast digital filing
- Use AI Summarizer to extract key clauses from lengthy legal documents
- Merge multiple case documents into a single organised PDF with Forge
- Password-protect confidential briefs before sharing with clients
- OCR scanning for digitising historical physical case records

TAILORED USE CASE

What SlimFile means for TV3 and Ghana's broadcasters

A broadcasting station like TV3 deals with an enormous volume of digital files every single day — show thumbnails, promotional graphics, press releases, broadcast scripts, media schedules, news PDFs, and digital content for social and web. Without a compression and file management strategy, these assets bloat servers, slow websites, consume bandwidth, and create operational inefficiency. SlimFile eliminates all of that.

The TV3 / Broadcasting Station Challenge

A typical broadcaster uploads hundreds of image and document assets weekly across their website, social media, internal systems, and external partners. Without compression, this creates compounding problems — storage costs rise, website speeds drop, sharing becomes cumbersome, and archiving is expensive.

70%

STORAGE SAVED

By compressing show thumbnails, promotional stills, and PDF press kits via the SlimFile API

3x

FASTER WEB PAGES

Optimised images load faster on TV3's website, reducing bounce rates and improving viewer experience

60%

LESS BANDWIDTH

Compressed assets transferred to partners, affiliates, and social platforms consume far less data

How TV3 would integrate SlimFile

✓ Website CMS:	Auto-compress all uploaded images and PDFs via the API before they go live	✓ Social Media:	Optimise images to WebP format for faster loading across platforms
✓ Press Releases:	Compress PDF media kits before distributing to journalists and partners	✓ Internal Docs:	AI Summarizer on lengthy programme reports and board documents
✓ Show Archives:	Batch-compress thousands of historical show thumbnails and stills	✓ OCR:	Digitise printed broadcast schedules and legacy documents
✓ Script Management:	Compress and merge broadcast scripts into organised PDFs with Forge	✓ Team Workspaces:	Collaborate on broadcast plans with shared documents and whiteboards

💡 **TV3 and any broadcaster can get started with the SlimFile Developer Program at api.slim-file.com/developer-program — including dedicated onboarding support, custom API rate limits, and a tailored integration plan for media and broadcasting workflows.**

Why it matters beyond files

SlimFile's compression infrastructure aligns with global sustainability goals (SDGs). Smaller files mean fewer bytes transmitted across networks, less energy consumed by data centres, and a lower carbon footprint for every broadcast, publication, and digital interaction. For institutions committed to responsible operations, SlimFile is not just a productivity tool — it is an environmental commitment.
